

SEARCH ENGINES AND RELIABLE RESOURCES

Search Engines

- Google: The most popular search engine with a vast index of web pages
- Bing: Another popular search engine, known for its visually appealing interface
- DuckDuckGo: A search engine that emphasizes privacy and doesn't track users
- Yahoo: A search engine that offers a variety of features, including news and email

Find Accurate Information Online

In the digital age, search engines have become our go-to source for information. However, not all information is accurate or reliable.

Evaluate the Reliability of Sources

- Look for sources that are well-researched and cited
- Check the author and publisher of the content
- Consider the date of the source and whether it's still relevant
- Avoid sources with biased or unreliable information
- Fact-check information

Reliable Resources

- Google Scholar: A search engine that indexes scholarly literature, including articles, theses, and books
- PubMed: A search engine that indexes biomedical and life science literature
- JSTOR: A digital library that offers access to academic journals, books, and primary sources in various fields
- Library of Congress: The world's largest library, offering a wealth of resources on a variety of topics
- Wikipedia: A user-edited online encyclopedia which is updated constantly
